

The next thing in email management & archiving  
Appliance based. No License or User Fees!

## Cost affordable eMail archiving and e-Discovery appliances for NZ businesses\*

### Reducing the load on Mail Servers.

A complete solution with up to five years disk storage with optional built in tape or Blue-Ray archive. No license fees, nothing else to buy. Move email off the Servers, increase performance, minimize help desk calls and allow users to search the archive. Available in desktop and rack mount models.

### Managing your Email data.

Emails are business records that must be preserved. Industry guidelines require organizations to retain all of their business-critical communications, transactions, and intellectual property. You can quickly resolve disputes, prevent litigation and comply with legislation when applicable with these appliances.

Email messages are not just conversations,  
they are business records that must be managed!

\*The eMail Archiver is powerful yet simple and affordable. Designed to be "plug and play" into an existing email server it virtually eliminates mailbox quotas and message size restrictions with no user fees. Suitable for companies from five to 1000s of users.

## Features

Installs in minutes.

- Integrates with Active Directory
- Archives all or selected mailboxes.
- Removes duplicate emails.

- Indexes emails and attachments
- MS Office, PDF, Zip and text.

Multiple access methods.

- Secure Browser based interface.
- Outlook XP/2003 integration.

Email Backup.

- Eliminates individual mailbox backup.
- Can restore individual emails.

Retention Policies.

- Manage the size of the message store.
- Increase server performance.
- Quicker disaster recovery.

Frees up IT Resources.

- No more requests for searches.
- Retrieve lost or archived mail.

Mail Archiving.

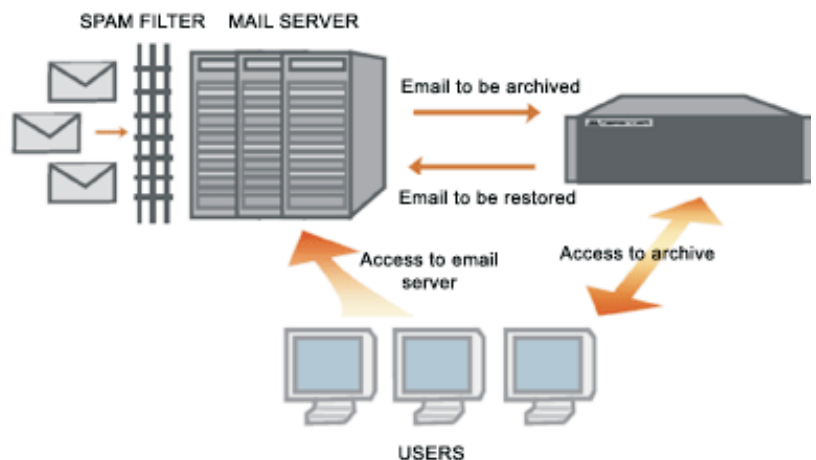

- Emails archived in real-time.
- No intentional or accidental deleting.
- Emails cannot be tampered with.

Regulatory Compliance

## Technology

### How the eMail Archiver works

Simply plug the eMail Archiver into an existing network, and within minutes the technology allows an organization to archive multiple email servers into a single email repository. Using a centralized archive for multiple servers enables de-duplication of email and attachments, delivering single instance storage. In addition, it provides a single place to capture all emails, conduct searches, enforce policies, view reports and ensure proper disposition of email. Finally, the archived email is written to remote storage.

The Email Archiver is a self-contained appliance. All necessary software and storage hardware are included within the unit.

After indexing the information is stored in the database, the raw message bodies are compressed and stored in the file system to improve database performance and system scalability. Each message is stored only once to maximize storage efficiency.
