Contact Packet Technologies or your Reseller to arrange your Network Traffic Report.

WAN Acceleration?

Ask about our Proof-of-Concept trial. It's FREE!

Don't have a WAN?

Worried about Internet over usage?

Ask about our easy-to-use affordable solution for managing your Organization's web traffic.

Customer Benefits

Easy to Install

We pre-configure the appliance for you prior to shipping. All we require is a local IP address, Default Gateway, SMTP and DNS Server addresses plus the IP addresses of any remote branches. A 30 second outage is all that is required to plug the Exinda in-line between your Router and Switch.

Immediate Network Traffic Visibility and Control

Once installed the Exinda supports detailed classification and analysis of specific applications such as HTTP, VoIP and Citrix. Identify and control P2P/iTunes, Facebook, MySpace, YouTube and see the network impact.

Customizable Network Reporting

During the pre-configuration you will be asked to supply the email addresses of those wishing to receive the reports. These reports are fully customizable and automatically generated.

Prioritize Mission Critical Applications

Improve the quality of service on critical business applications such as VoIP, and ERP. See an overall increase in the speed and performance for all network applications all while lowering the costs of remote access and office to office communications.

Improved Employee Productivity

Control over the utilization of network bandwidth usually results in improved employee Internet behaviour and an increase in productivity.
